# WHAT IS CRYPTOLUX

CryptoLux (CLX) is a decentralized, self-regulated and blockchain based financial payments network created for the users who seek independence from third party intermediaries like banks or the government and want fast and secure transactions.

The CryptoLux payment system plans to shake things up by disrupting and changing the existing bureaucratic and slow-moving financial systems with a world where everyone can easily and safely trade while being in full-control of his operations.

The CryptoLux network uses a decentralized ledger, without dependence of any central servers. It is simple to use, and completely blockchain-technology based. Any amount of money can be sent from A to B across the globe within a few seconds for a small transaction fee. No banks or other central authority controls any part of the payment system.

All CryptoLux transactions are anonymous. CryptoLux users can see and confirm every blockchain transaction without giving personal details like which transaction is done by whom. This new technology is revolutionizing the financial system. Compared to the banks that can go bankrupt and lose your money by making bad market deals or to the big companies that can be tempted to sell customer data without consent, CryptoLux avoids any such problems through its transparent and innovative character.

The number of CryptoLux (CLX) coins is limited, just like the market leader Bitcoin. The CryptoLux supply will only have a total output of 42 million coins. This number will protect and enhance the value of the CLX coins in future, leading to important gains and long-term stability for the CLX users and investors.

This resembles an economic system based on deflation, leading to appreciation in the value over time. Like most-important currencies on the market, the CryptoLux price will have the tendency to rise, when the demand is high and the number of mined CLX coins is still low. CryptoLux is using the fully decentralized Blockchain system, completely open to the public. CryptoLux is impossible to be hacked or faked, as multiple servers must be hacked at the same time due to the Blockchain technology. Thus, it is impossible for someone to forge transactions in the Blockchain. So CryptoLux is a highly secure and safe currency.

All CLX based transactions are recorded live, transparent, and spread across multiple servers around the world. CryptoLux embodies a grand vision which we invite you to be part of. Our trading investment opportunity will have an important role in our stakeholders' financial freedom.

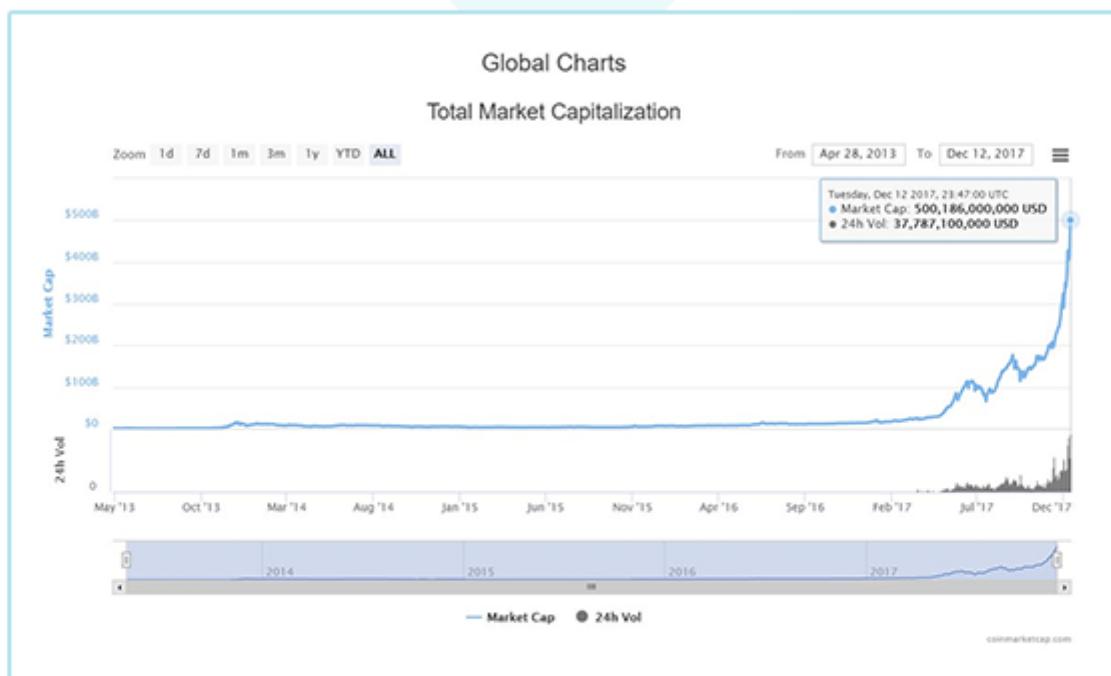

# MARKET OVERVIEW

The digital currencies market is exponentially growing. Investing is increasingly taking place through various crowdfunding and cryptocurrency ICOs. This area is continuously expanding, making the imagination of the investors as well as the public full of excitement. The main point of interest was the Bitcoin value rise and the moment when it crossed the five-figure mark of \$10,000. Digital currencies have become increasingly popular among the individuals, businessmen, and financial institutions.

Taking note of the unprecedented and phenomenal rise in the value and volume of the cryptocurrencies and ICOs, Jay Clayton, the SEC Chairman, made a public statement on cryptocurrencies and initial coin offerings on Dec. 11, 2017.

The SEC Chairman pointed out the probable benefits and features of cryptocurrencies such as the ability to make transfers without an intermediary and without geographic limitation, finality of settlement, lower transaction costs, personal anonymity, absence of government regulation or oversight, and the ability to publicly verify transactions.

Jay Clayton believes that ICOs are significant opportunities of funding, both for the network and the investor. The technology on which cryptocurrencies and ICOs are based is already transformative and efficiency enhancing, and it improves with every moment. The SEC Chairman encourages investors to be open to these exciting opportunities. The digital currency or cryptocurrency market has shown a meteoric rise in both value and volume, particularly since 2017 as depicted in the following CoinMarketCap.com chart:

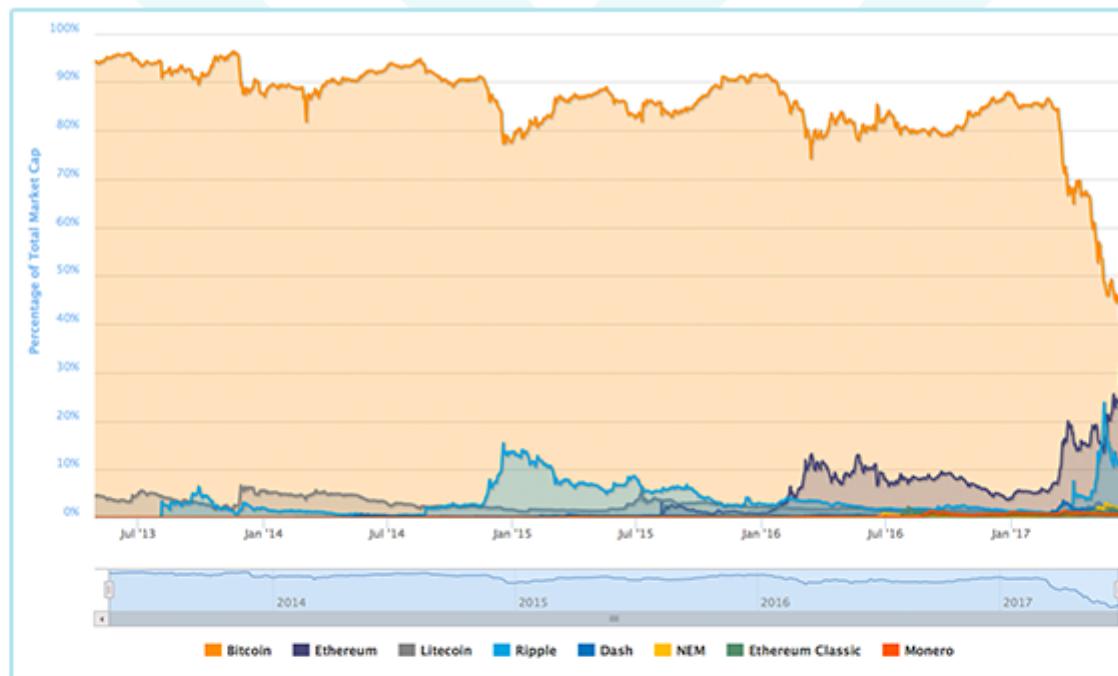

# MARKET OVERVIEW

The cryptocurrency market is growing rapidly. The number of cryptocurrencies has crossed the mark of 1400. The total market capitalization of cryptocurrencies is about \$700 billion. The total value of daily transactions in the cryptocurrencies is about \$40 billion. Digital currencies are creating new price records as time goes by. In this context, CryptoLux is here to stay and to integrate its ideas and global payment system.

Bitcoin created a phenomenal record by crossing a price landmark of \$20,000 on December 17, 2017. Bitcoin alone has a market capitalization above \$250 billion. However, Bitcoin is losing its dominance over cryptocurrency market due to various factors like high transaction fees and the initial technology used. At the same time, the altcoins (alternative cryptocurrencies) have gained a dominant market share with lower fees and better scalability.

The Bitcoin share, as part of the market capitalization has come down to one-third, and is currently at a level of about 33%, as shown below:

# INDUSTRY ISSUES & PROBLEMS

- ✓ Slow adoption of latest and emerging technologies in financial industry & payments.
- ✓ Poor facilities for banking customers & borrowers.
- ✓ Deficiency of fast and efficient funding and lending facilities.
- ✓ Emergence of non-backed-up ICOs without poor business model that are hurting cryptocurrencies' popularity.
- ✓ Lack of stability in the price of the digital currencies or the coins/tokens.
- ✓ Some of the large Institutional and high net worth investors are still largely skeptical of the worth of cryptocurrencies due to the fluctuating prices and due to hesitation in adopting or lack of deep awareness of the cutting edge blockchain technology.
- ✓ Traditional banking is losing the market share while crowdfunding and ICOs are raising substantial funds. The cryptocurrency market developed at the speed of light and is still poised for more growth due to many potential use cases of blockchain technology.

CryptoLux aims to resolve such problems through its integrated and state-of-the-art blockchain based solution for investment. CryptoLux will provide fast payment transactions as well as lucrative opportunities for earning & passive income.

Therefore, the CryptoLux Company aims to launch its Initial Coin Offering (ICO) to fund its plan to create a great financial marketplace.

# CLX TRADING

CLX allows the users and investors to buy CLX coins at a lower price and sell them at a higher price, and thereby pocketing the price difference between the buying and selling values. This is very beneficial as you get to retain all the profits made between buying and selling of CLX coins.

If the users want to invest in the trading option, they will need to own CLX coins in order to begin with. They simply need to buy the coins in the desired quantity from the exchange via one of the major accepted currencies; and then sell the CLX coins when the time is right. This is entirely in the hands of the users and investors. Therefore, the timing of buying and selling of CLX coins is exclusively the choice of the users.

Thus, CLX is providing the users a great opportunity to earn additional money simply by trading of CLX coins. It is like the opportunity provided by the traditional financial markets like the stock markets or the commodity exchanges in the form of stock trading, futures and options trading, and arbitrage trading.

# CRYPTO TRADING

Investing your capital in our trading system is a great opportunity to start crypto-trading. CryptoLux has its own cryptocurrency trading system and trading bot that generates a passive income/profit up to 45% each month. Our trading platform represents the perfect opportunity for users that don't have time to trade on their own.

Our active team will configure everything and make sure you obtain a daily profit based on your investment. CryptoLux Trading Investment opportunity will start on the day of our ICO launch. The weekly profit depends on the affiliate range of the user. The user makes a profit of around 50% with every package. The investment package ends at 150%.

# COLD STORAGE

Cold storage is another way to secure your CryptoLux tokens. It involves storing them offline – which means, away from any internet access. Keeping the coins offline substantially reduces the threat from hackers and other threats.

Cold Storage is the process of keeping investors' funds offline and secured/cold for a time-frame on a protected hardware device. In exchange, the stakeholders agree with CryptoLux on safely investing their funds for a limited time-frame. The reward system is simple, structured on multiple ranks. The procedure runs during exactly 1 year, afterwards, the funds will be unlocked. After only 90 days the investor can withdraw its CLX from the cold storage, by personal request.

## Is Cold Storage suitable for me?

We believe it is a safe and innovative way of getting more out of your CryptoLux coins. Cold Storage returns profits on a daily interest basis on a very simple principle: the longer you keep your funds deposited, a more significant amount of CLX will be received in return, as daily interest. Also, a bigger stored CLX amount means a larger profit. This is calculated at the current equivalent CLX/USD value.

Rank	Interest (daily returns)	Total CLX Storage (equivalent USD value)	Bonus
Bronze	3.84%	\$ 1.000	+0.05%
Silver	3.92%	\$ 2.500	+0.10%
